

JARON ROSENAU

Implementation Engineer / Systems Analyst / Civic Technology Builder

+1 (920) 292-0431 | jaron@rosenau.info | GitHub: denuoweb | Portfolio: rosenau.info | LinkedIn: in/jaronrosenau

SUMMARY

Implementation-oriented computer science degree candidate and systems builder focused on web services, application/database integration, Linux/cloud deployment, documentation, user support, and civic/public-infrastructure technology. Formal paid IT experience includes Lane Community College; broader implementation experience includes volunteer production maintenance and independent projects with real users, public deployments, and operational documentation.

CORE SYSTEMS FIT

Systems analysis and support: requirements clarification, workflow automation, user support, troubleshooting, bug reproduction, technical documentation, runbooks

Web services and integrations: Python, TypeScript, JavaScript, HTML/CSS, Flask, REST APIs, auth, webhooks, Firebase/Firestore, Cloud Run, Flutter web

Data and infrastructure: PostgreSQL, Redis, schema migrations, indexing, Linux, Debian, NGINX, Gunicorn, Docker, Terraform, GitHub Actions

Operations and security: configuration management, smoke checks, deployment procedures, access-control awareness, data-integrity focus, responsible disclosure

PAID TECHNICAL EXPERIENCE

Lab Assistant, Federal Work Study - Lane Community College | Sep 2023 - Dec 2023

- Built Flask services for internal workflows, including secure password reset functionality and lab attendance tracking.
- Implemented socket backends, automated email sending, and configuration management for repeatable operation.
- Supported practical software delivery in an academic lab environment, balancing security, usability, and maintainability.

VOLUNTEER TECHNICAL IMPLEMENTATION

Implementation Specialist, Volunteer - The Htmlcoin Foundation | May 2018 - May 2022

- Maintained production distributed-node software across recurring upstream releases; resolved merge/rebase conflicts across TypeScript/Node, Java, and Python repositories.
- Operated Linux web services and authored repeatable deployment and operations procedures for production support.

INDEPENDENT IMPLEMENTATION PROJECTS

QuestByCycle - civic transportation web platform

- Built and operated a public Flask/Vite platform with authentication, quests, badges, leaderboards, PostgreSQL, Redis, Debian Linux, NGINX/Gunicorn, documentation, pilot feedback, and 100+ user operations.

CrowdPM Platform - Firebase/TypeScript air-quality platform

- Built a PM2.5 monitoring stack with cloud data ingest, real-time map visualization, CI/CD quality gates, demo deployments, and smoke checks.

Moonshine Art - marketplace implementation case study

- Designed buyer checkout, seller onboarding, fulfillment, admin, support, and compliance flows across Flutter web, Firebase/Firestore, Stripe Connect, webhooks, Cloud Run, and moderation tooling.

DripCopy - Linux reliability utility

- Built a fault-tolerant Bash copier for unreliable optical-media/USB workflows with resumability, atomic writes, retry/remount behavior, deduplication, rate limiting, and structured logs.

CIVIC SYSTEMS AND PUBLIC INFRASTRUCTURE WORK

- Organized bicycle advocacy and participated in Corvallis/OSU transportation and bike-security discussions involving public infrastructure, safety, and sustainable mobility.
- Co-created QuestByCycle as a web-based game encouraging bicycle and transit use through quests, badges, teams, and carbon-reduction points.
- Documented community-facing issues and communicated with public stakeholders, reinforcing a practical interest in systems that serve residents and institutions.

EDUCATION AND RECOGNITION

- Oregon State University - B.S. Computer Science degree candidate; applied focus in software engineering and systems security.
- U.S. Department of Energy responsible disclosure acknowledgment.
